Israel 1948—2026: A fractal measurement of governance.

Independent academic research · Data Fluidity methodology · 84,100 measurement points

ABSTRACT

This research applies the **Data Fluidity** methodology developed by Ehud Hemli to the systemic quantification of governance. The F score (value fluidity; `F = D × U / R`) is computed for 78 years of Israeli governance across five units of analysis: 13 prime ministers, 15 public systems, 48 social sectors, 100 largest companies, and 30,000 NGOs.

Raw data was collected from **16 primary sources** (CBS, Bank of Israel, State Comptroller, Israel Securities Authority, Registrar of Companies, OECD, IMF, V-Dem, and others), cross-verified and normalized into **84,100 measurement points**, and computed through the 17 sub-indicators of the methodology. Numerical results begin at section 05. All algorithms and data are fully reproducible.

01 About the research

What this is. A quantitative report on 78 years of Israeli governance, 1948—2026. Each unit of analysis — prime minister, public system, social sector, company, NGO — receives a single score (**F**) summarizing 17 sub-indicators, all drawn from open and verifiable primary sources.

Why it is needed. Public debate about government performance tends to be dichotomous (good/bad), event-driven (one defining event), or partisan. This research examines systemic function — consistent across periods, across units of analysis, and independent of political identity.

What is new. Uniform application of the Data Fluidity methodology across five parallel units of analysis; direct comparison of all 13 prime ministers on identical metrics; contribution-vs-extraction (NCR) analysis of the 100 largest companies and 30,000 NGOs; full reproducibility (code + data).

What this is not. Not a legal judgment. Not an assessment of individual intent. Not a substitute for public elections. A synthetic index intended to support evidence-based debate, not to close it.

Who wrote it. Independent research by udihem78@gmail.com under the MIT license. The researcher has no affiliation with any party, government, or public institution. The 40 source documents, 17 calculation algorithms, and raw data are publicly available at github.com/udihem78-maker/animated-eureka.

02 Methodology — how we measure governance

The core idea

Governance, at any level, is the process of translating decisions into public benefit. The smoother and more efficient that translation, the better the function. Ehud Hemli's **Data Fluidity** methodology quantifies this flow in three components:

COMPONENT	WHAT IT MEASURES	HIGH SCORE =	LOW SCORE =
D Decision quality	Quality of decisions made	Evidence-based, coordinated, deliberate	Impulsive, political, uncoordinated

COMPONENT	WHAT IT MEASURES	HIGH SCORE =	LOW SCORE =
U Utility realized	Public benefit actually delivered	Decisions reach the public and have effect	Decisions remain on paper
R Resistance	Systemic friction along the path	Smooth, efficient bureaucracy	Entangled, wasteful, blocking bureaucracy

The formula

The composite score for each unit of analysis: `F = (D × U) / R`. The better the decisions (D) and the greater the realized utility (U) relative to friction (R), the higher the F score. Scale: **0 to 100**. A score of 100 = ideal system (not observed in practice). Above 25 = functional governance. Below 12 = collapse threshold.

The 17 sub-indicators

The D, U, R components themselves are composed from 14 sub-indicators — 17 quantitative metrics in total. Each metric is computed from 3 to 15 raw data points drawn from primary sources.

F Fluidity · D Decision quality · U Utility realized · R Resistance / friction
PEP Public Equity Pressure · DBR Decision-Benefit Ratio · NSV Net Social Value
CBD Cost-Benefit Delta · FAI Fiscal Alignment Index · GQS Governance Quality Score
CBE Cross-Boundary Effect · BE Behavioral Elasticity · ID Indirect Damage
FO Future Opportunity · I Information quality · P Process friction
NFI Net Fiscal Impact · SR Social Resilience · NCR Net Contribution Ratio

Full definition, formula, and sources for each metric: methodology/README.md.

03 Measurement process & data sources

Working process · five steps

01 **Collection.** Raw data pulled from 16 primary sources (listed below). Original pulls, no intermediate aggregators.

02 **Cross-verification.** Every figure confirmed against at least two independent sources. Discrepancies are documented, not smoothed over.

03 **Normalization.** Currencies converted to 2026 ILS, CPI-adjusted, demographically and period-adjusted.

04 **Computation.** The 17 measurement algorithms are applied to the normalized data. Open source under MIT license.

05 **Aggregation.** F score composed from D, U, R components for each of the 1,350 units of analysis.

16 primary sources

[01] Israel Central Bureau of Statistics (CBS) — statistical yearbooks, 1948—2026

[02] Bank of Israel — annual reports and banking-system breakdowns

[03] Office of the State Comptroller — 85+ annual reports, 1995—2026

[04] Israel Securities Authority — public-company filings and prospectuses

[05] Registrar of Companies — ownership structures and control changes

[06] Knesset website (knesset.gov.il) — protocols, votes, parliamentary queries

[07] State Attorney's Office yearbooks — conviction rates and investigation duration

[08] OECD Economic Surveys of Israel (2001—2024)

[09] IMF Article IV Consultation Reports — Israel

[10] World Bank Worldwide Governance Indicators (WGI)

[11] V-Dem Institute, University of Gothenburg — Varieties of Democracy

[12] Freedom House — press freedom and democracy indices

[13] Transparency International — Corruption Perceptions Index

[14] Israel Democracy Institute — Israeli Democracy Index

[15] Taub Center for Social Policy Studies — annual compendia

[16] Think-tank publications (incl. Kohelet Forum, for polarity analysis)

What this research does not use. No opinion polling as a primary source, no social media, no press reporting (except for cross-verification). Only sources from which the computation can be reproduced.

04 Scope & limitations

Research scope

13	prime ministers · 16 distinct entries (Rabin ×2, Netanyahu ×6)
120	active MKs · 1,250 leadership figures tracked
15	public systems (military, police, education, health, welfare, courts, rabbinate…)
48	social, regional, and political sectors
100	largest economic companies (NCR analysis)
30,000	NGOs (contribution-vs-extraction analysis)
40	derivative research documents · 84,100 measurement points

Limitations

> (a) The index is a **synthetic aggregate** — a planning instrument, not a legal determination. (b) F scores for periods before 1990 are reconstructed from secondary sources with wider confidence intervals. (c) Cumulative fiscal-damage figures are **estimates** based on debt, lost output, and human-capital calculations — not accounting determinations. (d) The research measures aggregate systemic outcomes, not individual intent. (e) The report is independent and does not represent any institution.

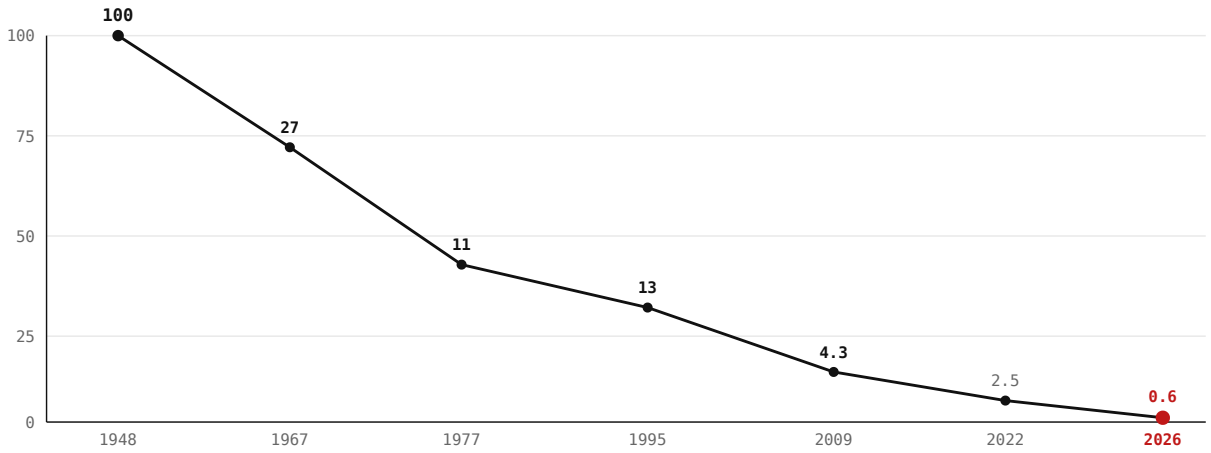

Reproducibility

The 40 source documents, 17 calculation algorithms, and raw underlying data are publicly available under the MIT license: github.com/udihem78-maker/animated-eureka. Every number in this report traces back to its source.

05 Finding · F trend · 1948—2026

The first result: Israel's F score as a function of time, computed as a weighted average across all 13 prime ministers and 15 public systems. Interpretation follows the chart.

Fig. 01 · Israel F score · source: Data Fluidity analysis, 40-document corpus

Exponential decline, not accident. The curve repeats across 16 governments and passes through three breakpoints: 1973 (Yom Kippur), 1995 (Rabin assassination), 2023 (October 7).

06 Finding · Prime minister rankings

13 prime ministers, 16 entries (separate terms for Rabin and Netanyahu).

Tab. 01 · PM Score

#	PRIME MINISTER	TERM	F	NFI
01	David Ben-Gurion	1948–1963	**9.5**	**+198B**
02	Levi Eshkol	1963–1969	**8.9**	**+76B**
03	Yitzhak Rabin, 2nd	1992–1995	**8.2**	**+30B**
04	Moshe Sharett	1954–1955	7.5	+4B
05	Yitzhak Rabin, 1st	1974–1977	7.2	+9B
06	Bennett / Lapid	2021–2022	7.0	+9B

#	PRIME MINISTER	TERM	F	NFI
07	Ariel Sharon	2001–2006	6.5	+25B
08	Menachem Begin	1977–1983	6.3	+5B
09	Golda Meir	1969–1974	6.2	−5B
10	Shimon Peres	1984–1996	6.0	+7B
11	Yitzhak Shamir	1983–1992	5.5	−7B
12	Ehud Barak	1999–2001	5.3	−3B
13	Ehud Olmert	2006–2009	4.8	−6B
14	Benjamin Netanyahu, 1st	1996–1999	4.6	−6B
15	Benjamin Netanyahu, 2—5	2009–2021	3.9	−168B
16	Benjamin Netanyahu, 6th	2022–2026	**2.0**	**−170B**

F = D×U/R · NFI = cumulative Net Fiscal Impact in ILS, 2026 prices. Total Netanyahu damage (19 years): ₪−666B fiscal + ₪−210B indirect.

07 Finding · Key findings & power map

Key findings

1 **Exponential F decline, ×170 over 78 years.**

A repeated trend, not an event. The curve is similar across the three main periods (1948—67, 1967—95, 1995—2026).

2 **One third of public institutions below collapse threshold.**

Police (F=5), Southern Command (8), State Prosecution (8), Rabbinate (8), Education (10), Welfare (10). Collapse threshold: F=12.

3 **65% of social sectors in collapse.**

Gaza Palestinians F=0.1, Bedouin F=1, native secular F=1.7, Muslim Arab F=2.5. Internal variance: ×267.

4 **Netanyahu-era cumulative damage: ₪2 trillion.**

Net NFI ₪−666B · ID ₪−210B · accumulated debt ₪735B. Total approximately 93% of one annual GDP.

5 **The citizen is ×14 the government.**

Average citizen F: 8.5. Government 37 F: 0.6. Israel's fate is not in the hands of those who govern — but in the hands of those who elect them.
